Configuration checklist

Three wizard steps
The wizard tells you to learn ports for the applications you use, then FQDNs and IP addresses for your cluster
The same pages say to monitor the connectivity pages because the lists change. This campus does not freeze an
Cluster kinds
The connectivity requirements page defines commercial as the standard environment, FedRAMP as an isolated U.S.
If you do not know the cluster, the page says to ask the account representative. Do not guess na1.
Checklist you can actually run
Select only the applications in the ports checklist that the tenant uses. Copy that result, not this whole tab
Allow paired ranges. The IP address page says a missing range is a failover risk.
Integrated Softphone has its own allowlist, including a separate FedRAMP list, reached through the wizard.
Require TLS 1.2 and at least one listed cipher in each direction before you call the integration done.
